

- New type of amplifier built-in photo sensor
- Slim and compact side-on models
 - Lightweight and compact
Thin, space-saving sensor allows flexible mounting
 - Flat lens less affected by dust and dirt
Superb stability at high power (detecting distance of 10 m)
 - High-intensity indicators with excellent visibility
Easy to check if the sensor is operating from a distance

Type

Detection method	Detecting distance	Model		Operation mode	Output mode
		NPN Output	PNP Output		
Through beam	10m	GN-T10CR	GN-T10CRPN	Light-ON/ Dark-ON selectable (with switch)	Open collector
	7m	GN-T7C	GN-T7CPN		
Polarized retroreflective	0.03-1.3m	GN-M2CR	GN-M2CRPN		
Diffuse reflective	400mm	GN-R40CR	GN-R40CRPN		
	300mm	GN-R30C	GN-R30CPN		
	70mm	GN-R7C	GN-R7CPN		
Convergent reflective	3-30mm	GN-Z3CR	GN-Z3CRPN		
	1-40mm	GN-Z3C	GN-Z3CPN		

Optional Parts

Type	Model	Pinhole diameter	Detecting distance with plate/filter attached		Type	Model	Shape
		Direction of polarization	Red LED	Infrared LED			
For through beam type only	Pinhole plate	GNP1	φ 1mm	400mm	Cable with M8 connector	FBC-4R2S	Straight (2 m)
		GNP2	φ 2mm	1m		FBC-4R2L	Angled (2 m)
		GNP3	φ 3mm	3m	Mounting bracket	GN-B1	Mounting bracket dedicated to cable type
		GNP5-1	5×1mm	2m			
	Interference prevention filter	GN-PFA	Longitudinal	5m	Protective cover	GN-PCB1	Robust stainless steel cover to protect the sensor and reflector from impact. See page 195.
		GN-PFB	Horizontal	(Applicable to red LED type only)		GN-PCB2	
						G-K7B

Detection method			Through beam		Polarized retroreflective	Diffuse reflective			Convergent reflective	
Detecting distance			10m	7m	0.03-1.3m	400mm (200 x 200 mm white drawing paper)	300mm (200 x 200 mm white drawing paper)	70mm (100 x 100 mm white drawing paper)	3-30mm (50 x 50 mm white drawing paper)	1-40mm (50 x 50 mm white drawing paper)
Detection object			φ6mm (or more) Opaque		Glossy objects including mirror-like materials and stainless-steel plates or opaques	Opaque, translucent, and transparent				
Power supply			12-24V DC±10% / Ripple 10% or less							
Current consumption			Transmitter: 22mA or less Receiver: 15mA or less		25mA or less					
Output mode		NPN type	NPN open collector Rating: sink current 100mA (30 VDC) or less /Residual voltage: 1 V or less							
		PNP type	PNP open collector Rating: source current 100mA (30 VDC) or less /Residual voltage: 2 V or less							
Operation mode			Light-ON / Dark-ON selectable (with switch)							
Mutual interference prevention function			Anti-interference filter available (up to 2 sensors)	_____	Provided (up to 2 sensors)					
Response time			0.5ms or less							
Operating angle			10° (at receiver)	30° (at reflector)	_____					
Hysteresis			_____			Up to 10% of detecting distance				
Light source (light wavelength)			Red LED (700nm)	Infrared LED (880nm)	Red LED (630nm)	Red LED (640nm)	Infrared LED (880nm)		Red LED (640nm)	Infrared LED (870nm)
Indicator			Transmitter: Power indicator (orange LED) Receiver: Operation indicator (orange LED), Stability indicator (green LED)		Operation indicator (orange LED), Stability indicator (green LED)					
Volume (VR)			Sensitivity adjustment (on receiver for through beam type)							
Switch (SW)			Light-ON / Dark-ON selector switch							
Short circuit protection			Provided							
Material	Case		Polybutylene terephthalate							
	Lens		Methacrylate							
Connection	Cable type		Attached cable (dia.3.5mm) Transmitter: 0.2 mm² x 2 cores 2m (gray) Receiver: 0.2 mm² x 3 cores 2m (black)		Attached cable (dia. 3.5mm) 0.2 mm² x 3 cores 2m (black)					
	Connector type		M8 connector (cable with M8 connector separately available)							
Weight	Cable type		Transmitter / receiver: approx. 60g		Approx. 60g					
	Connector type		Transmitter / receiver: approx. 10g		Approx. 10g					
Accessory					K-71 reflector	Mounting screws, instruction manual (mounting bracket separately available)				

- The detecting distance and detection object of retroreflective types varies, depending on reflector types combined with the sensor. The detecting distance is the range which you can set for the reflector. The sensor can detect an object even in extremely short range.
- The detecting distance of diffuse reflective type varies, depending on transmittance of the detection object. Please be sure to check the detection beforehand.

Environmental Specification

Ambient light	5,000 lx or more
Ambient temperature	-25 - +55°C (non-freezing)/Storage -30- +70°C
Ambient humidity	35 - 85%RH (non-condensing)
Protective structure	IP67
Vibration	10 - 55 Hz / 1.5 mm double amplitude / 2 hours each in 3 direction
Dielectric strength	AC1000V 1 or more
Insulation resistance	500 VDC, 20 MΩ or higher
Shock	500 m/s ² / 3 times each in 3 directions

• Applicable power supply unit

PS series
High capacity of 200 mA at 12 VDC

(General-purpose type) PS3N
PS3N-SR
(Multifunctional type) PS3F
PS3F-SR

Input/Output Circuit and Connection

Transmitter of through beam type

Receiver of through beam type/polarized retroreflective type/diffuse reflective type/convergent reflective type

- The output transistor turns off when load short circuit or overload occurs. Check the load and turn the power back on. To extend the cord, use thick wires (at least 0.3 mm²).

Connector type pin assignment and connection (Sensor)

(Cord with M8 connector)

M8 connector type

M8 connector type is also available about all models. See Rating/Performance/Specification for details.

M8 connector type

Lead color	Pin No.	Function
Brown	1	12 - 24 VDC
White	2	no connection
Blue	3	0V
Black	4	Control output

Cable with M8 connector (optional)

(in mm)

FBC-4R2S (straight)

For Correct Use

Be sure to follow the instructions in the operation manual provided for correct use of the product.

- This sensor is not designed to prevent death or injury. It is not a life saving device.
- For safety applications except such usage, ensure safe operation of the system as a whole including detection and control function.
- This product is not explosion proof.

Indicators

- The operation indicator (orange LED) and stability indicator (green LED) each show different received light intensity levels as described in the figure.
- After aligning the optical axis and adjusting the sensitivity, make sure the light received and the light blocked is within the stable ranges by blocking and unblocking the lights with a detection object repeatedly. Setting within the stable range increases reliability against differences in environment after installation.

- The orange LED is the operation indicator. For the light ON mode, the indicator is illuminated when the light is detected. For the dark ON mode, the indicator is illuminated when the light is blocked.

Reflector of polarized retroreflective type

The detection distance varies depending on the reflector model used.

Reflector model	K-71	K-7	S-25	S-510G
Detecting distance	0.03 - 1.3m	0.01 - 2m	50 - 600mm	0.05-1m
Remarks	Accessory	Optional	Optional	Optional

Mounting of sensor

The tightening torque for mounting screws should not exceed 0.6 N·m.

Typical application

Switching between light ON and dark ON and setting sensitivity

(For the light ON mode)
Turn the switch to L.ON.

(For the dark ON mode)
Turn the switch to D.ON.

Light-ON/Dark-ON selector (white)

Sensitivity adjustment volume (yellow)

Sensitivity can be adjusted for detection with a through beam model in which blocking of the light beam is inadequate due to a translucent or small object or for detection with a reflective model in which any influence of the background should be avoided or the sensor must detect low intensity of reflected light. Turning the volume counterclockwise reduces the sensitivity.

(For setting the light ON/dark ON switch (white) and adjusting the sensitivity volume (yellow), use the adjustment screwdriver supplied and turn carefully. Turning the volumes with excessive force may damage the volumes.)

About pinhole plate

Pinhole plates allow the reduction of the size of a detection object or the margin of movement. Using the sensitivity adjustment volume in combination allows detection of even smaller or near-transparent objects.

Interference prevention filters

When two sensors are mounted close to or in contact with each other, interference prevention filters can be used to avoid faulty operation caused by mutual interference.

Interference prevention filters can be used only for through beam type sensors emitting red light.

Attachment of pinhole plate /interference prevention filter

Put a hook of the plate on the mounting groove at the top of the sensor and press the bottom of the plate in until it clicks.

Dust, drops of water, etc. in the pinhole or the filter may cause faulty operation.

(Note: You cannot use the pinhole plate and the interference immune filter at the same time.)
